Keith Tran

Atlanta | (828) 290 3897 |ktran380@gatech.edu| U.S Citizen

Objective

Software Engineering student with strong experience in AI-driven product development, computer vision, and full-stack applications, seeking a Software Engineering or AI/ML internship starting May 2026. Passionate about building production-ready systems that bridge machine learning, clean UI, and real-world business impact.

Education

Georgia Institute of Technology | Atlanta, GA *August 2025 – Present*
Bachelor of Science in Computer Engineering, GPA 3.7 Expected Graduation, May 2028

Honors

Bill & Melinda Gates Scholar — Nationally selected recipient (48,000+ applicants)
Western Carolina Community Foundation Scholar — Nathaniel Ellis Cannady Jr. Recipient

Skills

Programming: Python, Java, JavaScript, Swift, TypeScript
Framewroks & Libraries: PyTorch, Ultralytics, TensorFlow
Systems & Platforms: macOS, Windows, GitHub, Google Colab

Experience

Elkamet Inc. | Flatrock, NC *October 2024 - Present*
Software Engineer / ML Intern

- Deployed YOLO-based vision models in PyTorch to automate part detection on live video.
- Engineered real-time pipelines in Python to process video streams and maintain stable object counts.
- Refined datasets using iterative operator feedback to reduce duplicate detections by 40%.

Smokey Summit LLC | Hendersonville, NC *2023 - Present*
Founder

- Built an Amazon FBM business managing inventory and fulfillment across 15+ SKUs.
- Developed internal tracking systems in Python to monitor orders, margins, and logistics workflows.

Projects

Plant Pals | AI ATL Hackathon *October 2025*
Software Engineer (Team-based project)
Built an AI-powered plant-care assistant that identifies plants from images and generates personalized care recommendations through a mobile-first interface.

- *Developed the core AI pipeline for plant identification and care generation, achieving reliable plant recognition and actionable guidance during live demo conditions.*
- Integrated frontend and backend components under hackathon time constraints, delivering a fully functional end-to-end product within 36 hours.

Real-Time Vision-Based Part Counter | Elkamet Inc. *May 2025*
Software Engineer / ML Intern
Developed a real-time computer-vision system to automatically count manufactured parts in containers using live camera feeds for factory quality control.

- *Designed and trained a YOLO-based object detection model to detect and count parts in real time, reducing manual counting errors and operator workload.*
- Collaborated directly with manufacturing engineers to refine requirements and optimize performance for deployment on production hardware.

Activities

Hendersonville Community Garden | Volunteer *October 2024-Present*

- Planted a variety of fruits and vegetables, moved mulch, reinforced embankment, and harvested.

Georgia Tech IOS Club | Boot Camp Graduate

- Deployed a piano teaching app using Swift UI/UX as a capstone project.
